# INSTALLATION INSTRUCTIONS

## TWO CAR KIT

(Up to 20'x7' Door / 4 Rows of Panels)

### Material Included in Kit:

(4) 2'x20' Roll Insulation, (1) 1 1/2" x 180' Roll Double-Sided Tape  
(1) Disposable Razor Knife

## ONE CAR KIT

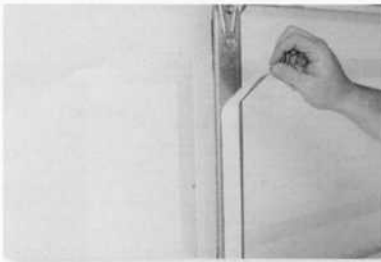

(Up to 10'x8' Door / 5 Rows of Panels)

### Material Included in Kit:

(5) 2'x10' Roll Insulation, (1) 1 1/2" x 180' Roll Double-Sided Tape  
(1) Disposable Razor Knife

**Tools Required:** Tape Measure, Straight Edge

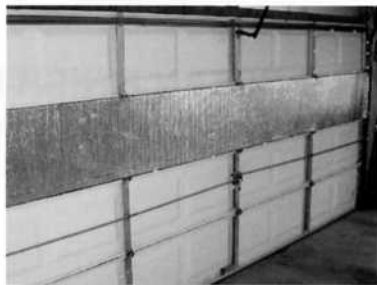

**Prior to installation, clean garage door panel framework where reflective insulation is to be applied. Make sure any debris is removed prior to applying double-sided tape.**

- 1 Peel one side of double-sided tape and press firmly & evenly to garage door panel framework. Cover any and all framework horizontally & vertically where insulation is to be applied. The double-sided tape should be applied at a temperature of 65°F-100°F.

- 2 Measure and cut each roll of insulation to fit over the mounted strips of double-sided tape.

- 3 Test fit each piece to ensure proper sizing for each panel. Remove the release liner from the tape and firmly press the reflective insulation against the adhesive working from side to side or top to bottom. Trim any excess insulation.

**Note:** When using our garage door kit with foil one side and white one side, the white should face the interior of the garage.
